

# Science Blogging in German

Martin Fenner, Gobbledygook

August 17, 2008

Most scientific papers are now published in English, and I believe that this trend is good for international collaboration. Therefore I believe that blogs intended for scientists should also be written in English. The topics and discussions in German language science blogs are often similar to what we discuss in English, and it makes the audience much smaller if we restrict ourselves to a particular language (the same could be said about French, Italian, Spanish, Japanese or Chinese blog posts).

But there are good reasons to write German language science blogs, and the German science blogosphere is indeed very active. For those understanding German, I've listed some of the more popular blogs and blog hostings sites below:

- ScienceBlogs.de. 29 blogs from the German language sister of ScienceBlogs
- SciLogs A collection of science blogs, hosted by publisher Spektrum der Wissenschaft
- academics.de. The blog by the academic job portal
- scholarz.blog by the social networking site scholarz.net
- SciBlog. An Austrian blog about science communication
- Wissenswerkschaft by Marc Scheloske
- Begrenzte Wissenschaft by Sven KeÄŸen
- Fischblog by Lars Fischer
- medinfo by Oliver Obst
- infobib by Christian Hauschke and four other authors.
